Outcomes/Effectiveness

While MCHP does not currently have enrollees enrolled in a Healthy Behaviors Program, we actively notify enrollees of the availability and benefits of the programs through provider and member handbooks and web portals, engagement during the health risk assessment process, engagement during case management outreach and provider education during outreach visits. Further, we actively use and monitor Health Risk Assessments, Self-Referrals, Referrals from providers, family and responsible parties, Case Management engagement, Utilization Management referrals, Behavioral Health referrals and referrals from Community-Based Organizations to identify enrollees who may benefit from the programs.
